15. Scaling & Performance
16. FAQ & Support

1. INTRODUCTION & OVERVIEW

GLPI-LibreNMS + Nginx Proxy Manager is a complete, professional solution for modern IT management, combining asset management, network monitoring, and automatic service publishing in a single integrated Docker platform.

This comprehensive guide will walk you through every step of implementation, from preparation and installation to advanced operations and scaling.

2. ARCHITECTURE & COMPONENTS

GLPI (Gestion Libre de Parc Informatique)

Complete system for IT asset management, license tracking, incident management, and service desk.

LibreNMS

Open-source platform for network monitoring, metrics collection, alerting, and reporting.

Nginx Proxy Manager

Modern reverse proxy with admin UI, SSL/TLS termination, and auto-discovery for service publishing.

npm-auto-discovery (Python Service)

Custom service that monitors Docker containers and automatically creates proxy hosts in NPM based on labels.

3. PREREQUISITES & INSTALLATION

Prerequisites:

- * Linux Server (Ubuntu 20.04+, Rocky 8+, Debian 11+)
- * Docker Engine v20.10+
- * Docker Compose v1.29+
- * 4GB RAM minimum (8GB recommended)
- * 20GB disk space minimum

Quick Start (3 Commands):

```
$ git clone https://github.com/anatolie-ernu/GLPI-LibreNMS.git
$ cd GLPI-LibreNMS
$ chmod +x install.sh && ./install.sh
```

The installer will guide you through interactive configuration and start containers automatically.
